

Carbon account 2024-2025

English-language edition of the Klimakompasset result - calculated 4 May 2026

156.20 tonnes CO₂e

Calculation: Copy of Hærværk carbon account Period: 1 July 2024 - 30 June 2025 Country: Denmark
Emission-factor year: 2024

Method choices

The results reflect methodological choices made in the calculation. Electricity uses a market-based emission factor, accounting for green certificates or guarantees of origin. Air transport includes the Radiative Forcing Index (RFI), recognising the greater climate effect of emissions released at altitude.

Intensity indicators

Market-based indicator	Result
CO ₂ e per employee	22.31 t
CO ₂ e per DKK million net revenue	0.00 t
CO ₂ e per m ²	1.04 t

Outside-scope results

The GHG Protocol excludes certain results from Scopes 1, 2 and 3, including biogenic emissions and avoided emissions from material recycling. The market-based outside-scope result is -3.91 t CO₂e (-2.50%).

Scope 3 categories

The GHG Protocol divides Scope 3 into upstream and downstream categories. Categories 14 (franchises) and 15 (investments) are outside Klimakompasset's coverage. Location-based electricity is recommended for this view.

Source and interpretation note

This English edition translates the Danish Klimakompasset output supplied by Restaurant Hærværk. Numerical values, period, methodological choices and category allocations are preserved. Decimal commas have been converted to decimal points for English-language presentation. The original Klimakompasset report remains the calculation source of record.
